

How to prepare a graphic file for www.CustomTableFelt.com

Preferred Applications

QuarkXpress™
Adobe Illustrator™
Adobe Photoshop™,
Macromedia Freehand™
CorelDraw™

FYI - Although Microsoft products and similar desktop publishing products are not intended for large format printing, your graphic can be reworked for production.

Preparing Your Print Files

When designing in Illustrator, Freehand or Corel, always outline your fonts to avoid font conflicts and save or export the file as an .eps (encapsulated PostScript)

Please save all Photoshop files as either CMYK .tif or .eps files.

When using a page layout program, always include all screen and printer fonts used in your graphics. Please do not stylize fonts in Quark, use the pure Italic or Bold font in the font family.

Resolution should be 100dpi - 150dpi at final output size.

Always include bleeds.

All files should be CMYK. If using a Pantone® color, specify the number and we will match as closely as possible. Additional charges apply for color matching.

Always include a color proof to ensure file (not color) accuracy
